MedlinePlus Guide to Healthy Web Surfing
What should you look for when evaluating the quality of health information on Web sites? Here are some suggestions based on our experience.
Consider the source -- Use recognized authorities
Know who is responsible for the content.
Look for an "about us" page. Check to see who runs the site: is it a branch of the Federal Government, a non-profit institution, a professional organization, a health system, a commercial organization or an individual.
There is a big difference between a site that says, "I developed this site after my heart attack" and one that says, "This page on heart attack was developed by health professionals at the American Heart Association."
Web sites should have a way to contact the organization or webmaster. If the site provides no contact information, or if you can't easily find out who runs the site, use caution.
Focus on quality--All Web sites are not created equal
